

The WearVue Solution

WearVue cuts through the noise of a busy mining site, making wear tracking instant, safe, and foolproof.

Green – Keep running. Everything is in good condition.

Yellow – Plan ahead. You have time, but maintenance should be scheduled.

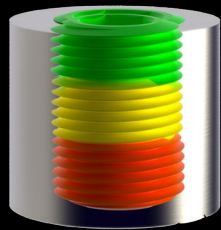

Red – Act now. The part is worn out and must be replaced immediately.

No More Dangerous Inspections – Read wear levels from a distance, no climbing required.

Intuitive & Accessible – If you can see colour, you know exactly what to do.

Eliminate Waste & Downtime – Stop replacing parts too soon, stop last-minute failures.

Our team of experts work with you to customise WearVue to suit your needs. All Materials, Colours and Indicator sizes will be tailored to your environment and procurement requirements.

Wear Monitoring Made **Visual**

The Everyday Reality

Workers Still Risk Their Lives for Inspections.

Every day, workers climb into, under, and around dangerous equipment, just to do condition checks.

- One missed step inside a haul truck tray or climbing into a chute could be fatal.
- Waiting for something to break means last-minute shutdowns and costly rush repairs.
- Critical wear decisions are being made under pressure, with no clear data, until now.

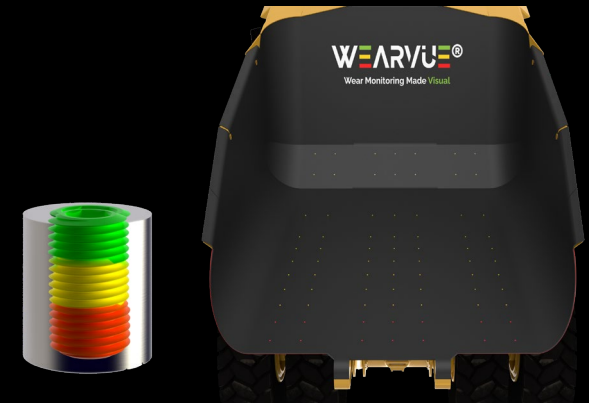

WearVue in Action

WearVue can be installed into anything you want to monitor wear. Above the Tapered indicators have been installed into the wear plates of the bucket

Below the Rubber Plug Indicators have been installed into the HME Tyres.

Above housed screw indicator has been installed into the high wearing areas of the truck body

Below this crusher chute wear plate has had the Solid Wear Plug installed into the center of the plate
